

SEED PRIMER

(SUPER CONCENTRATE)

Balanced Nutrition for Seeds

The Converte Seed Primer was scientifically designed to improve seeds and germination efficiency. Our seed primer has been specially formulated to deliver the most complex and balanced nutrient treatment directly into the seed. The seed embryo then has higher access to nutrients to improve germination rates, and build vigorous growth towards maximum yield.

Objectives of Seed Priming

Seed priming is another pathway to maximise nutrient uptake. This practice aims to build a more vigorous root system. During priming, nutrients are taken up by the seed. When sown, the elevated nutrients help early germination of the growing embryo through nutrient mobilisation. Roots emerging from germinating seed already have their share of applied nutrients and empowers vigorous searching of soil nutrients and soil moisture. Using a seed primer gives your crop an early advantage for optimum growth and development.

For use with conventional and organic seed in:

Horticulture, Broadacre, Pasture, Turf and Nurseries

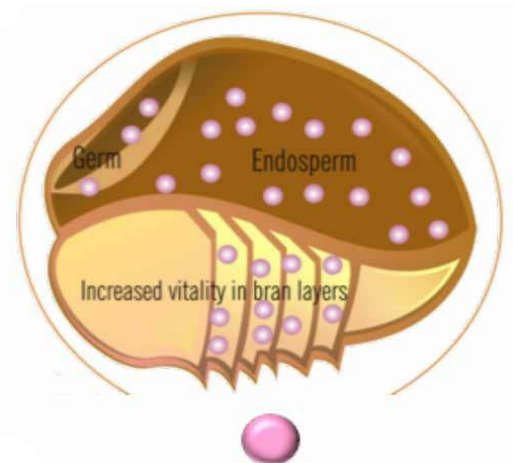

Concentrate Application Guide	
Usage	Application Rate
Broadacre	Drip on seeds using an auger at a rate of 500ml per tonne of seed. Use 4 litres of water to dilute on application. Seeds should be sown 24-48 hours past priming.
Pasture/Turf/ Home Garden	Mix 1:10 with water then spray seeds 1-2 hours before planting. Do not soak.

Storage and Handling: Compatibility, and/or performance cannot be guaranteed when combined with other products. Store in a cool, dry area out of direct sunlight

Agitate or shake well before use.

Safety Directions: Product is non hazardous. Keep out of reach of children.

Manufactured by: Converte Pty Ltd, PO Box 8159, Griffith, NSW, 2680

Increased depth and breadth of macro, micro, and phytochemicals nutrients for seed health.
